

DEVARAG P

📍 Bhubaneswar, Odisha ✉ devaragzz10@gmail.com ☎ +91-6238982993 🌐 in/devarag-p-b37418246 🐙 github.com/Devaragz

EDUCATION

Bachelor of Technology

International Institute of Information Technology, Bhubaneswar • Bhubaneswar, Odisha • 2027 • 7.9/10

12th, CBSE

JNV Malappuram • Malappuram, Kerala • 2022 • 95%

10th, CBSE

JNV Malappuram • Malappuram, Kerala • 2020 • 93.66%

SKILLS

Languages: Python, SQL, C++

Databases: MySQL, SQLite

Development Tools: VS Code, PyCharm, GitHub, Git

Technical Expertise: Data Pipelines, ETL/ELT Processes, Object-Oriented Programming, Data Structures, Algorithms, System Design, Multithreading & Concurrency, API & Backend Integration, Database Persistence

PROJECT

MatchEngine

github.com/Devaragz/Match-engine

- Architected a high-performance C++ trade matching engine featuring O(1) order lookups, modifications, and cancellations for scalable backend services.
- Engineered a custom asynchronous TCP server and implemented thread-safe multithreading with mutexes to handle concurrent network traffic and distributed workloads.
- Developed persistent disk logging pipelines to capture real-time VWAP analytics and ensure reliable data auditing.

SubScout

github.com/Devaragz/SubScout

- Developed a subscription management application in Python to automate the parsing, normalization, and analysis of multi-source subscription data pipelines.
- Engineered optimized SQLite database schemas, enabling real-time querying and filtering of 1,000+ complex transaction records with millisecond response times.
- Implemented dynamic ETL data pipelines for efficient CSV export, streamlining the transformation and processing of structured datasets for automated downstream reporting.

MiniRedis

github.com/Devaragz/MiniRedis

- Engineered persistent LRU cache system in C++, achieving read latencies 3-5 μ s and reducing data retrieval times by over 95% compared to direct disk fetch.
- Designed core node data structures for efficient state management, maintaining rapid write latencies of $\sim$ 50 μ s.
- Integrated MySQL for robust data persistence across system reboots, ensuring fault tolerance and seamless in-memory syncing.

AWARDS & HONORS

Competitive Programming

Code360 • 2026

- Achieved the “Specialist” badge in Code360 weekly contests by consistently solving complex algorithmic challenges under strict time constraints.

Problem Solving

Code360 • 2025

- Successfully solved 200+ advanced Data Structures and Algorithms problems on Code360, demonstrating strong proficiency in optimization and system-level logic.
-
